DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to apparatus with pretensioner, actuating fluid, control portion, classified in class 73, subclass 866.4.
- II. Claims 10-21, drawn to test stand with accumulator, pneumatic cylinder, valve, piston, classified in class 73, subclass 788.
- III. Claims 22-26, drawn to method testing seat belt system including coupling seat belt system to a pneumatic test apparatus and simulating jerk forces, classified in class 73, subclass 869.9.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require, pneumatic cylinder, valve, piston. The subcombination has separate utility such as testing tensile strength of webbing.

Inventions I/II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different

process of using that product (MPEP § 806.05(h)). In the instant case the products may be used for testing other materials for strength properties other than seat belt systems.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
